

Light RTM - Level Sense

Unique Container Mounted Alarm

Suitable for Both Pressurized and Non-Pressurized Containers

Operated Solely by Pneumatics

Light RTM - Level Sense

Many closed mould operatives have found to their cost that running out of catalyst or solvent during production is a time consuming mistake that can put the mould or machine out of production for many hours in addition to the cost of wasted materials and their disposal.

Level Sense is a unique, container mounted, alarm system that warns the machine operator that the level of catalyst or solvent in a container has reached the pre-determined minimum safe level and will continue to alarm in a loud, high pitched whistle until the relevant container is refilled.

The Level Sense unit is suitable for use in both pressurised and non-pressurised containers as the totally pneumatic system was designed by Magnum Venus Plastech specifically for use in the frp workshop environment and is powered solely through the machine's own air circuit.

The small and highly efficient unit only consumes air whilst the unit is in alarm mode, and consumes no air whatsoever in the safe level condition. The operator can quickly confirm that the Level Sense system is active and working correctly by pressing the manual test button on top of the red body, and on hearing the whistle can be safe in the knowledge that they will be alerted to low liquid levels in the container.

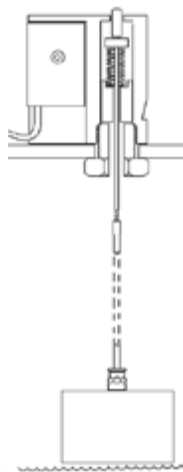

Part Numbers:

- Assy-0361: Level Sense Assy - For Non-Pressurized Tanks
- Assy-0364: Level Sense Assy inc Regulator
- Assy-0366: Level Sense Pressure Assy - For Pressurised Tanks
- Assy-0367: Level Sense Pressure Assy including Regulator

Durable, safe and compact, the Level Sense can, on request, be factory fitted to new machines throughout the Magnum Venus Plastech range.

Alternatively as the unit requires just one mounting hole in the lid, or shoulder of the container, can be ordered as a retro-fit kit and rapidly fitted to your existing machine's container, then simply piped into the existing pneumatic circuit using the Tee fitting and instructions supplied in the kit.

The Level Sense unit can be supplied with or without the compact regulator / filter unit.
